Wildlife Deterrent Silicone

The Humane Solution to Wildlife Roof Damage

Is Wildlife Destroying Your Roof?

No matter the roof type, wildlife damage can cause serious problems for commercial roofs. Birds and rodents will chew through roof substrates to try to find insects, to build a nest, to crack open nuts, etc. Although these holes can be small, if this issue is persistent, it will only be a matter of time before the roof becomes compromised. With this in mind, we have designed a Wildlife Deterrent Silicone that can stop animal damage in its tracks.

Is This Product Safe for Animals?

The proprietary ingredient we use to deter wildlife is non-toxic and completely safe. In fact, it deters animals from swallowing the roofing materials so it is a benefit to any animals that may chew at it!

Will This Affect the Silicone's Performance?

Our Wildlife Deterrent Silicone performs the same way as our typical silicone! You can enjoy the benefits of PM silicone with the peace of mind that your roof will have added protection from pesky animals.

Case Study

This building was getting torn apart by buzzards living on a nearby cell tower. Since our Wildlife Deterrent Silicone has been installed, the bird damage has stopped and the building owner now has a 10-year watertight warranty on the roof!
